

Review of: "The Efficacy of Copper Nanoparticles in Treating Viral Skin Infections: A Systematic Review and Meta-Analysis"

Nilly Abdelfattah

Potential competing interests: No potential competing interests to declare.

The idea of the research is interesting, but the research lacks a lot of information. Such as what virus was treated on the skin? How many cases have been worked on? Illustrative pictures of cases before and after treatment? Blood tests and sensitivity for treated cases compared to untreated cases? Copper is a valuable material that has a safety limit for use. Has this been taken into consideration? Is it preferable to use safer materials than copper? Nano enters the body in all ways, so it has its drawbacks, unless there are materials that are not pure. The research idea is good, but the material used is dangerous and the research wants to add results in tables, concentrations, and analyses. Thank you very much.
