Following are my suggestions:

The abstract exhibits a lack of clarity in presenting the findings. The abstract would benefit from enhancement. Could you please rework the text in an academic manner? What is the unique contribution of your study? What is the influence of your research? In what practical contexts may the findings be implemented? What is the plan for the continuation of the work? What are the constraints and restrictions of this study?

The study might benefit from a more precise and succinct issue definition at the outset in order to enhance reader comprehension of the research's central emphasis and importance.

Enhance the comprehensibility of the methodology section by furnishing a detailed account of the sequential procedures used in conducting the simulations. This should include a comprehensive delineation of the parameters, assumptions, and sources of data utilised in the simulations.
