Potential competing interests: No potential competing interests to declare.

I would like to congratulate the authors for this interesting and relevant study.

However we have a few remarks:

- **The introduction is too long**
- **It is better to reformulate the aim of the study**
- **The technique of weight measurement in infants who have not acquired walking, is it reliable?**
- **It is recommended to assess the nutritional status of children under 5 by the ratio (weight/ height to weight)**
- **Add the following definitions: stunting/ waisting/ undernutrition/ overweight /obesity**
- **limitations of the study were not discussed**
