Review of: "The Effectiveness of Telerehabilitation in Improving Balance Control Among Older Adults: A Systematic Review & Meta Analyses"

Sara Majlesi¹

1. University Malaya Medical Centre, Kuala Lumpur, Malaysia

Overall, this article is a significant contribution to the field of geriatric rehabilitation, highlighting telerehabilitation as a promising intervention for improving balance in older adults. However, the study could benefit from:

- A more detailed exploration of the variability in outcomes across different telerehabilitation programs.
- Consideration of accessibility challenges for older adults with limited technological skills or resources.
