Ulfat Baig et al reported that "Somatic evolution of Cancer: A new synthesis". This work is interesting because this manuscript puts forward a new view on the etiology of cancer. This manuscript is worth of publishing, however, the following shortcomings need to be corrected firstly.

- 1.This work needs an English-edit.
- 2.This manuscript looks like a review or commentary, it is better to delete lengthy statements, give a refined and accurate point of view, and point out the experimental method to verify the viewpoint and the new scientific questions to be answered.
- 3.The defects in this manuscript must be discussed clearly and comprehensively.
- 4.The author must focus on the evolution of cancer, and make a full exposition of it.
- 5.The relationship between cancer and somatic evolution or unhealed wounds should be fully explained.
- 6.This manuscript needs to be further compressed, and the statements that are repeated with figures should be deleted.
