Potential competing interests: No potential competing interests to declare.

This paper presents a thorough examination of the relationship between climate change, heatwaves, and the transmission of Dengue fever. The structure and flow are well-organized, covering multiple critical aspects of the topic.

- While the paper touches on adaptation measures, proposing specific, actionable strategies could provide more concrete recommendations for policymakers and public health officials.

- Address Conflict in Data: When mentioning mixed results about the effects of heatwaves on Dengue incidence, elaborating on specific studies that report these variations could add depth to the discussion.
