Paper Title: "How to use Curvenote for writing papers"

Qeios ID: BS78NF

Comments:

This tutorial paper proposes a new way of writing a scholarly paper using Curvenote. It will be very much useful for the researchers to write the articles in an effective manner. This tutorial is written and organized in a well manner. However, it needs a minor revision before publication.

1. In page 12 How to insert single line equations and multiline equations and Greek symbols is described. Sample equations are given in the required format. In addition to that actual equations can be added with equation numbers. The equation numbers also can also be referred in the following text.

2. A link for demo video of using the tool Curvenote can be added which might be useful for new researchers.

Other minor issues are,

1. Mixed quotes (single quotes and double quotes) have been used. Either single quote or double quotes can be used throughout the paper.

2. Font size in Figure 12 is larger than other images. It should be uniform in all images.

3. Figure 7 caption should be corrected. HOw to How.

Figure 7. HOw to use curvenote blocks

2. Check references

Only two references 2011 and 2015 are added. Additional recent references from 2020 to 2023 can be included.
