Potential competing interests: No potential competing interests to declare.

The manuscript needs to be improved in the English language and proofread. Also, a deeper review of the literature focuses on aluminium toxicity. There are various papers on the topic. Considering the available references about the topic (more than 100,000 citations), the number of references cited in this manuscript is small. The review should be very in-depth to offer some contribution to the topic.

Aluminium is the third most abundant element in the geosphere. The paper should focus on the toxic chemical forms of aluminium compounds.

The environmental impact of aluminium is not only on plant biology but also on soil diversity.

Is there a conclusions section?
