Potential competing interests: No potential competing interests to declare.

The authors attempt to explore the effect of COVID-19 on food consumption preferences. This article's topic is updated and intriguing. I thus recommend it to be published after minor revision.

Comments:

1. The background information is presented adequately in the introduction.
2. Every single one of the references that were used is pertinent to the study that was conducted.
3. The findings are laid forth in an understandable manner.
4. The findings provide evidence that the conclusions are reasonable.

Minor issues:

1. The English language and style are fine; just a little proofreading is necessary.
2. According to the research results of this paper, the policy impact should be presented in the conclusion.
3. It is necessary to explain the limitations of this study and the possible future route of the research on this topic.
