# SLCO2B1 wt Allele

National Cancer Institute

## Source

National Cancer Institute. *SLCO2B1 wt Allele*. NCI Thesaurus. Code C105430.

Human SLCO2B1 wild-type allele is located in the vicinity of 11q13 and is approximately 106 kb in length. This allele, which encodes solute carrier organic anion transporter family member 2B1, plays a role in transport of organic anions and may function in regulation of placental uptake of sulfated steroids.
