# Adenosine-Sensitive Ventricular Tachycardia by ECG Finding

National Cancer Institute

## Source

National Cancer Institute. *Adenosine-Sensitive Ventricular Tachycardia by ECG Finding*.  
NCI Thesaurus. Code C71057.

An electrocardiographic finding of tachycardia that is usually terminated by the administration of adenosine. Usually, it is a result of cAMP-mediated triggered activity and typically originates from the right ventricular outflow tract. This type of tachycardia occurs in patients with apparently normal hearts.
