# Recombinant OX40 Ligand

National Cancer Institute

## Source

National Cancer Institute. *Recombinant OX40 Ligand*. NCI Thesaurus. Code C1548.

A recombinant agent, which is chemically identical to or similar to the endogenous protein Fas ligand OX40, a member of the tumor necrosis factor (TNF) family. Expressed by antigen presenting cells (APC), OX40 ligand binds to the OX40 receptor on CD4 T-cells, thereby priming antigen-specific activation of CD4 T-cells and inducing CD4 T-cell secretion of interleukin 4 (IL-4). (NCI04)
