Potential competing interests: No potential competing interests to declare.

The research paper is very extensively drafted, considering the minute details of the topic. There are few suggestions that needs to be incorporated:

1. There is no Literature Review as a heading, all the papers referred are mentioned under the Introduction heading. Literature Review should be a different heading as the literature of various papers.
2. The papers reviewed are not in proper format, citation is missing.
3. Method chapter has been extensively drafted, but lack of a small block diagram or the flow chart showing the actual flow of work.
4. Round One data was analyzed using both inductive analysis and content analysis as mentioned by authors, but clarity about inductive analysis and content analysis is required.
5. In Result chapter, authors have calculated mean and Interquartile Range in Round two and Round three for different IoT behavior sub-domains, but the formula for the above calculation is missing.
6. Little clarity is required in the manuscript, as in few areas the purpose behind the research work and the method adopted is not clear.

Overall paper is very good, **I suggest acceptance with above suggestions**
