CCND3 wt Allele

National Cancer Institute

Source

National Cancer Institute. *CCND3 wt Allele*. NCI Thesaurus. Code C97382.

Human CCND3 wild-type allele is located in the vicinity of 6p21 and is approximately 115 kb in length. This allele, which encodes G1/S-specific cyclin-D3 protein, plays a role in the modulation of cell cycle progression. A translocation of this gene and the IGH gene locus may be associated with splenic marginal zone B-cell lymphoma.
