

Review of: "Study of the Problems of Determining Public Opinion of the Israeli-Palestinian War in Social Networks"

Bhuvanesh Singh

Potential competing interests: No potential competing interests to declare.

The author researched the sentiments of the Israeli-Palestinian War using the dataset from Reddit. The author used the rule-based NLP VADER algorithm for sentiment analysis. There are a few gaps which the author needs to update.

1. Title – Please make the title more appropriate to the content.
2. Literature review is quite scant; please improve that.
3. Provide more information on the dataset.
4. Language in the pre-processing is missing. Were the posts from users translated?
5. Please explain Fig. 1 and Fig. 2. The figures themselves are not self-explanatory. What does the author want to convey?
6. Averaging out the results somewhat results in a neutral sentiment. Try to use a better way for evaluation.
7. Challenges and further scope of work are missing.
