This paper presents “Review of: Melatonin, ATP, and Cataracts: The Two Faces of Crystallin Phase Separation.” The manuscript is well organized and written. In addition, the authors are suggested to address the following comments in order to meet the requirements of the Journal.

1. The objectives of the study should be more clearly delineated in the last paragraph of the Introduction.
2. Define nomenclature, subscripts, superscripts, Greek symbols, and abbreviations in table form.
3. Check all references one more time, especially with co-authors' first and last names, and volume, issue, and page numbers.
