## Recommendations for "Factors Affecting Economic Crisis in Ethiopia: A Literature Review"

- Over all the research looks smart and great in Economics application point of view. And I have seen and would like to forward the following comments.
  - **Title:** good
  - **Abstract:** The abstract should be one big concrete paragraph and should have to forward basic concept about the study. Omit words like "We, I, You," from the paper. Using a recent data makes your paper great and this was a positive side of this study. There were no discussion of Data analysis and the thing you recommended.
    - .over six paragraph of ideas couldn't be listed in abstract and make it smart.
  - **Introduction:** as a researcher you have to focus on your research; your literature review should be supported by other researcher ideas. Paragraph 3 of the introduction "The findings show that growth in Ethiopia is positively affected by investment" good but support your forecasting with other researcher study. Please do not generalize the study. Your introduction was too small and it was shallow. Try to add other theory or concept that will support your literature review (study).
  - **Macroeconomic Factor and Socio-economic factors:** You tried your best but not enough; this part was like a discussion.
  - **Policy implication:** good but still not supported by other study results
  - **References:** the best part of this paper was the referencing style.
