Potential competing interests: No potential competing interests to declare.

A strong point of the article is the fact that the research methodology is mixed, as it combines qualitative and quantitative methods.

There are also a number of aspects that need to be improved. The introduction is very long. The concept of academic resilience should be analyzed in accordance with more recent studies.

The results should have been presented for each type of research.

The research hypotheses are not clearly formulated.

The number of participants is reduced.

There are no graphs with the obtained data.
