# Schistosoma mekongi

National Cancer Institute

## Source

National Cancer Institute. *Schistosoma mekongi*. NCI Thesaurus. Code C124392.

A species of flatworms in the family Schistosomatidae. *S. mekongi* is found exclusively in the Mekong river basin of Laos and Cambodia in South-east Asia. The snail *Neotricula aperta* acts as the intermediate host for this schistosome. Dogs serve as a reservoir for *S. mekongi*.
