Knuckle pads-leukonychia-sensorineural deafness-palmoplantar hyperkeratosis syndrome

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Knuckle pads-leukonychia-sensorineural deafness-palmoplantar hyperkeratosis syndrome. ORPHA:2698*

A rare, syndromic genetic deafness disease characterized by symmetric or asymmetric knuckle pads (typically located on the distal and interphalangeal joints), leukonychia, diffuse palmoplantar keratoderma, and congenital, mild to moderate sensorineural deafness.
