Potential competing interests: No potential competing interests to declare.

The introduction is quite lengthy, spanning multiple paragraphs and covering various aspects related to the topic of sustainable futures and knowledge co-production. While it is important for an introduction to set the context and provide background information, it is also important to keep in mind that readers may lose interest or become overwhelmed by a lengthy introduction.

It may be helpful for the author to consider breaking down the introduction into smaller sections or paragraphs that can be easily digested by readers. Additionally, they may consider focusing on the most important points and arguments, rather than attempting to cover every aspect of the topic in detail within the introduction. This can help keep readers engaged and interested, while still providing the necessary context and information for the article.

One issue is that the findings may not be generalizable to other contexts, as each case study is unique and context-specific. Additionally, the researcher's own biases and perspectives may influence the interpretation of the data, leading to potential subjectivity.

That being said, the rigor of the study can be improved by ensuring that the case selection is purposeful and reflective of the diversity of participants, contexts, approaches, and activities. Qualitative analysis can also be a rigorous method for exploring the nuances of the data and revealing in-depth findings. Furthermore, using a transformative framework and a brokered and structured participatory process can help ensure that the findings are grounded in the perspectives and experiences of the participants.

It appears that the figure used in the study is a less effective rendition of conceptual frameworks presented in the literature, and it doesn't seem to provide value. In addition, academic articles typically require figures and visuals to be presented in a more subdued and professional manner. While the use of color and shape can enhance the visual appeal of a figure, it is important to balance this with the need for clarity and accuracy of information.
