

Review of: "Unravelling the Phytochemical and Pharmacognosy Contour of Traditional Medicinal Plant: *Pterocarpus Marsupium* Roxb"

Minmin Tang

Potential competing interests: No potential competing interests to declare.

This manuscript reviews phytoconstituents and pharmacological activities of *Pterocarpus marsupium* Roxb and has some scientific significance. However, there are some details that the authors should consider to increase the quality of the paper.

1. The abstract section should be more coherent to make it more attractive.
2. It would be clearer to list the chemicals in table 1 by chemotaxonomy.
3. Please check the chemical name "Isoliquiritigrnin" is correct in table 1.
4. Please redraw the chemicals in table 1 by the same standard in the software.
5. Please add the two hydrogens to the structure of "Pterostilbene" in table 1.
6. Please check the structure of "Aglycone" in table 1.
7. Please relayout the content of table 2 to make it clear.
8. In the "Pharmacological activities" section, authors should add their own understandings rather than listing the results of literatures.
