Potential competing interests: No potential competing interests to declare.

The paper deals with a very interesting topic, although some aspects should be discussed more extensively.

1. Information on copper nanoparticles is too general.
2. The mechanisms of action of copper nanoparticles against viral infections have not been described in detail. They are not clearly and lucidly presented.
3. I miss the comparison of the action of copper nanoparticles with other nanoparticles, such as AgNPS.
4. The authors should emphasize what is new in the paper.
5. The content of the work would be enriched by figures and tables related to the subject of the paper.
