**Potential competing interests:** No potential competing interests to declare.

1. The caption should be more specific: Is the study about a new or unstudied brand of LINAC? Is the study offering a new method? It cannot be understood from the entire text.
2. As linked to the first criticism, at least the conclusion should include specific novelty more than routine LINAC usage.
3. Design of the manuscript and language usage do not have a problem. It is well.
4. I accept the manuscript by considering the 1st and 2nd suggestions/corrections.
