# Non-myeloablative TCR alpha/beta-depleted Haploidentical Hematopoietic Stem Cell Transplantation

National Cancer Institute

## Source

National Cancer Institute. *Non-myeloablative TCR alpha/beta-depleted Haploidentical Hematopoietic Stem Cell Transplantation*. NCI Thesaurus. Code C150424.

An allogeneic hematopoietic stem cell transplantation (HSCT) in a recipient that was not pre-treated with a conditioning regimen of high doses of chemotherapy or radiation, using cells depleted of T-cell receptors (TCR) alpha and beta as Graft-versus-Host Disease (GvHD) prophylaxis, from a related donor who is a partial human leukocyte antigen (HLA) tissue type match.
