Dear #Editor:

Thank you so much for inviting me to review this manuscript. The manuscript topic and methodology are interesting. However, I have some concerns: [1]. What is the novelty of this study? This is because the study lacks/missed to highlight the novelty of this contribution in the abstract and introduction. [2]. What gaps aimed to fill are missed, or not appropriately clarified. [3]. Introduction: this section lacks state-of-the-art content, and the overall writing is poor--flawless, lacks coherence and structure. [4]. The methodology lacks connection with the problem of the study. [5]. Results and discussion: this section is not adequately interpreted and lacks comparison with empirical findings. [6]. Conclusion/Summary: this section should summarize the main findings, and I think it needs refinements. [7]. References: Most sources cited in the text and referenced are older than five years, while science is dynamic and societal problems too. Thus, author(s) are suggested to cite recent sources within five years.
