Interesting article, but a few things can be improved.

1. The 'Results and Discussion' can be improved. The 'discussion' part is not sufficient,
2. The language of the article (including the title) can be better. At times, it reads like a blog article rather than a research article.
3. There should be a consistency in the usage of the terms Fig. and Figure.
4. In the same figure, it is very uncommon to use figure 1 and 2, or 3 and 4. Rather, the common convention is to use 1A, 1B and 2A, 2B, etc.
5. Some of the text was not in English. Should be kept in mind if the aim is to publish in an English language journal.

Thank you. Best wishes.
