

Review of: "A Methods Note on Remote Sensing Platforms and Large-Scale Archeological Impact Assessments (AIA) in the Philippines"

Chong Xu

Potential competing interests: No potential competing interests to declare.

This manuscript introduces how various aerial remote sensing platforms can conduct archaeological impact assessments on scattered or large-scale project sites, providing archaeologists with efficient and targeted utilization of limited time and resources, following simplified workflow. The specific suggestions are as follows: (1) The background should be introduction. In this section, there is a lack of clarification on the review of the study direction. It is incomprehensible that there were no references in the introduction. (2) Discussion should actually be a conclusion. (3) The real discussion part seems to be missing. The authors should discuss the progressiveness and limitations of this work from the aspects of methods and results in combination with previous work. In addition, it is also necessary to provide some prospects.
