

Review of: "Prevalence of Buruli Ulcer Among Residents in Jasikan Municipality: A Cross-Sectional Study"

Michael Ocaido

Potential competing interests: No potential competing interests to declare.

The article is informative. It raises concern to conduct awareness about the presence of Buruli ulcer among the population in Jasikan Municipality community. However, to improve the quality of this paper, an attempt should be made to discuss the potential risk factors for the disease as found by the study. The results of statistical analysis should have shown this trend. This was not done though mentioned in the methods. This is major weakness of this paper.
