Review of: "Towards a Comprehensive Theory of Aligned Emergence in AI Systems: Navigating Complexity towards Coherence"

Wei Liu[1]

1 University of Illinois at Urbana-Champaign

1. The introduction and background knowledge of this paper seems to be a little bit too long, please try to be concise.

2. There is no data presented for any of the graphs. It's understandable that the figures are only for demonstration, but please explain how they are made.

3. The formulas are hard to read, please provide pdf for the latex formulas.

4. The findings are novel and the conclusion gradually builds upon each other, but I'm afraid they are not deep enough.

5. When introducing the complexity theory in the paper, please provide a deeper introduction, including formulas.
