Potential competing interests: No potential competing interests to declare.

Firstly, there is a typo in "**uveitis**." It is important to have the scientific terms spelled correctly in *Definition*-type resources.

Glaucoma is a complex disease, and the situation in secondary glaucoma is even more complicated. The prevalences of the underlying etiologies of secondary glaucoma vary across populations. Neovascular glaucoma may not be the commonest cause of secondary glaucoma; instead, uveitis, pigment dispersion syndrome, and pseudoexfoliation may be the top causes in some populations. I would suggest not mentioning this point in the *Definition*.
