Potential competing interests: No potential competing interests to declare.

This research is quite interesting and was carried out when konjac was booming in Indonesia. Although this research is a case study, the results of this research can enrich scientific knowledge about how rush farming of an agricultural commodity affects farmers, and also how related parties respond to rush farming of konjac.

This paper has also been written with good scientific principles, starting from the abstract, introduction, results, discussion, and conclusion.

In the discussion, it is sufficient to explain the rush to cultivate konjac and the possible effects on other agricultural commodities. Is there an impact of this rush farming on the sustainability of konjac farming and konjac business in the future? and are there any efforts by relevant stakeholders to anticipate this? if there is an explanation, it will be able to enrich the discussion of this article.

Minor improvements in the reference section (the author's name is incompletely spelled, please check).

Good luck.
