Potential competing interests: No potential competing interests to declare.

The study further established a statistically significant relationship between knowledge of HIV status ( $OR = 1.034$ ;  $CI = 0.428-2.500$ ;  $P = 0.004$ ) and contraceptive use. The data revealed that respondents who did not have multiple sexual partners were 0.450 less likely to use contraceptives as compared to respondents who had multiple sexual partners ( $OR = 0.450$ ;  $CI = 0.060-3.377$ ;  $P = 0.007$ ).

What does it mean this CI? Does it have an association? If "1" is included in the CI this doesn't show an association.
