Review of: "The Cyano-Diels–Alder Reaction: From Nitrile Activation to Functional Molecular Architectures"

Gijo George[1]

1. Independent researcher

See FIGURE 2. The crystal structure shown is not that of compound 9. It is not even a tetracyanobutadiene (TCBD) derivative. Just compare the highlighted regions in the figure above to easily understand the difference between those structures. The author should consider correcting the figure with the correct crystal structure of compound 9.
