Very good narration on the review of potential of GLP1-RA in treating tobacco use dependence and obesity.

There has already been studies and successful results of GLP 1 RA for obesity , but limited report on use for tobacco dependence and related weight gain on quitting tobacco.

Abstract : clear and concise outline of the essence of the article.

Introduction: did cover the incidence and prevalence rate data of the conditions in elaborate way.

Results based on multiple study provides a promising data about the efficacy of glp1 agonists in smoking cessation/nicotine dependence and post cessation weight gain

strength of article:

- Article holds value and relevance in current literature
- Will help physicians to incorporate to daily practice
- Data are mentioned supporting the relevance of article

Weakness:

More sample size and more studies needed to support the use of GLP 1 agonist in smoking cessation

Important to mention the cost effectiveness and side effect

Mechanism of action still needs to be clearly explained
