Title: Acceptable

Abstract: Acceptable

Introduction: Acceptable

CLINICAL VIGNETTE: Did the patient undergo a brain MRI before injecting 4 ml of 0.25% Bupivacaine with ultrasonography? If it was removed, was there an olfactory bulb and olfactory nerve signal abnormality? If a brain MRI was not performed, an explanation should be added as to why it was not taken.

Discussion: Current literature information on changes in MR signal during and after COVID infection of the olfactory nerve and bulb should be added.
