

Review of: "A Case Study on Industry-Institute-Cooperation"

Ahmed Hakro

Potential competing interests: No potential competing interests . No conflict of interest

The article is interesting to link industry-institute cooperation. Offering graduate programs or a shortage of faculty may or may not determine the industry-institute cooperation. Rather, it is an institution's strategic outline and approach as how they design and implement the curriculum, co curriculum or industry engagement approach. The author need to identify that institutional approach against the practices. The institute has been offered two consultancy projects which author attempted to derive the tentative benefits and impacts. But, would be much better to look at this cooperation as an approach to link the faculty and students engagement through deliberate approach to designing the framework, links, policies and competent processes which may result that institutions engagement with the industry-as deliberate approach to provide the services, expertise and benefit from the mutual engagement. Most of the higher education institutions devise successful strategic directions to engage their faculty and students to find professional courses, exposure, internships and providing them practical industry related competencies to boost their perspectives of employability. The author need to adjust the paper with the suggestion to look deeper as how a systematic and planned approach deployed to achieve or need to achieve through systematic engagement of academia and industry.
