

# Review of: "The Imperative of a Comprehensive One Health Approach for Mosquito-Borne Disease Control in Indonesia"

Phunuch Muhamad

Potential competing interests: No potential competing interests to declare.

The review manuscript about the One Health Approach for Mosquito-Borne Diseases Control in Indonesia provides useful and important information for the control of mosquito-borne diseases in tropical countries, especially in Indonesia.

However, there are recommendations/comments on the following points for improvement of the manuscript:

- The manuscript illustrates the approach for the One Health Approach for Mosquito-Borne Diseases Control in Indonesia, which is quite broad and results in a loss of highlight. To deal with this point, the author should provide some example(s), such as a community and/or a disease model that is successful from the implementation of the One Health Approach for Mosquito-Borne Diseases Control, by gathering activities as well as endpoints for evaluation from stakeholders.
- Besides the One Health Approach for Mosquito-Borne Diseases Control policy, there are some programs related to Mosquito-Borne Diseases Control, e.g., the program that is implemented by WHO; the author should mention how the One Health Approach for Mosquito-Borne Diseases Control overcomes the other(s).
