I thank the authors for the efforts they put in to x-ray the phytoconstituents present in *P. marsupium* Roxb and their pharmacological activities; however, I think the following suggestions will improve the work

1. This work is a review; therefore, it should be more thorough and extensive
2. The introduction should be rewritten to capture problems and objectives
3. The pharmacological activities of each of the phytoconstituents listed in Table 1 should be included. Also, more structures of the phytoconstituents should be captured; being a review, the work should be extensive.
4. The authors should also include the images(leaves and stem back) of the plant under study
5. I think the references should also be rewritten using the most acceptable APA format.

I wish the authors success.
