

Review of: "Refrigerant Selection in Air Conditioning Systems Considering Thermodynamic, Environmental, and Economic Performance Using the BHARAT-II Multi-Attribute Decision-Making Method"

Tayfun Dede

Potential competing interests: No potential competing interests to declare.

First of all, I would like to thank the authors for preparing this valuable work and bringing a new perspective to the field of refrigerant selection. The BHARAT-II method seems to have the potential to simplify the decision-making process and better reflect the preferences of decision makers. The application of the method is demonstrated with two different case studies. The results are compared with other studies in the literature, and the differences are discussed. The advantages of the proposed method are well explained. The proposed method has the potential to help decision makers in such an important issue as refrigerant selection.
