# Total Lymphoid Irradiation

National Cancer Institute

## Source

National Cancer Institute. *Total Lymphoid Irradiation*. NCI Thesaurus. Code C156721.

The use of extensive lymphatic irradiation to achieve immunosuppression. The irradiated areas include the cervical, supraclavicular, and axillary lymph nodes, and the mediastinal region, as well as the porta hepatis, celiac nodes, splenic pedicle and spleen, and para-aortic, iliac, inguinal, and femoral nodes.
