This article 'In-Vitro Antibacterial Activity of some Ganoderma Species: A Review' describes the results of preclinical (in vitro) and clinical investigations on the antibacterial and antifungal properties of Ganoderma species, proving that many Ganoderma species have certain antimicrobial activities and can be considered as complementary to standard medical treatment. Some minor issues need to be concerned.

1. Pay attention to the writing rules of all Latin in the text, and note the abbreviations of species names.
2. Please pay attention to the writing rules for 'CHCl₃', 'IC₅₀', 'μg mL⁻¹', et cetera in the text, which should be revised according to standard rules.
3. Some of the typical important groups of compounds found in Ganoderma spp. should be added.
4. There are several typos and grammatical errors that need to be corrected carefully.
