Potential competing interests: No potential competing interests to declare.

1- Adding the keywords "large molecule" and "macromolecule."

2- Why include "microsphere" and "microemulsion" in the body of abstract also in the title if the focus is solely on nanocarriers?

3- It would be worthwhile to provide information on which vesicle is suitable for a specific site of action.

4- The method of preparation should be presented.

5- When discussing solid lipid-based nanoparticles, it is important to highlight the differences between solid lipid nanoparticles and solid lipid nanostructures.
