Potential competing interests: No potential competing interests to declare.

The article is very interesting, the current subject and that should be discussed due to all the family changes that have happened in recent years.

The authors indicate that there is a lack of literature on the topic. I point out that it would be important to understand how this search for articles was carried out and how they were selected to compose the article.

The reader would be able to understand the designs of the included articles and the highlighted topics of each one. I suggest including a table with featured articles.

In conclusion, it would be interesting to return to the key questions and try to direct their answers or even indicate that many of them still need to be deeply studied by health professionals. Congratulations!
