# Salivary Gland Inverted Ductal Papilloma

National Cancer Institute

## Source

National Cancer Institute. *Salivary Gland Inverted Ductal Papilloma*. NCI Thesaurus. Code C35835.

A very rare benign tumor of the minor salivary glands, characterized by a luminal papillary proliferation that arises at the junction of the salivary gland duct and the oral mucosal surface epithelium and expands as a nodular mass into the lamina propria. It presents as an asymptomatic mucosal swelling.
