

Review of: "The Influence of Perceived Spiciness on Actual Taste Experience: An Experimental Study"

Abirami Rathinasabapathi

Potential competing interests: No potential competing interests to declare.

1. In this study, the investigation of the impact of information on perceived spiciness is a novel and innovative approach in the field of sensory perception. The manuscript, however, lacks articulation of the research gap, which is critical for contextualizing the study and demonstrating its contribution to the field.
2. Also, authors can consider restructuring the paper for better flow and organization.
3. Make sure to emphasize how your study contributes to the existing literature.
4. The manuscript is missing demographic information about the study participants, which is essential for understanding the sample's characteristics and potential implications for the generalizability of the findings.
5. The manuscript would benefit from providing detailed information about the research instrument used in the study.
