Potential competing interests: No potential competing interests to declare.

In my opinion, the paper seems to be scientifically correct and interesting, and I recommend it be accepted for publication after taking the following important points during the preparation of the revised paper:

- 1. The Introduction should make a compelling case for why the study is useful and a clear statement of its novelty or originality by providing relevant information and answers to basic questions such as: What is already known in the open literature? What is missing (i.e., research gaps)? What needs to be done, why, and how? Clear statements about the novelty of the work should also appear briefly in the introduction section.
- 2. mention software used to solve the modeled problems in the paper.
- 3. List the advantages of the used scheme in an order of convergence and accuracy.
