The present study reveals the "Fallacy of Abundant Cheap Nuclear Energy". This study seems interesting, but after some major revision, it will be able to be published in this well-reputed journal.

1. Abstract is insufficient
2. Add introduction portion
3. Add mathematical methodology included in calculation
4. Present, how much energy is required to extract 6 kilograms of ordinary uranium?
5. Add the cost of disposing of uranium waste for the analysis.
6. A similar article is already published at "<https://www.ft.com/content/f0bb3fae-4ca1-11da-89df-0000779e2340>", so how is it different from your article?
7. Your article is already available on ResearchGate. Why?
