

Review of: "Controlling Offenses on Health Care Personnel through Environmental Design of Healthcare Environments"

Tawaziwa Wushe

Potential competing interests: No potential competing interests to declare.

The Topic meets the study objectives and the research questions are addressed. However the author needs to justify the sampling technique used and state the number of hospitals in an area and why choosing four hospitals. Also the author needs to start Section 3. on Methodology with words not a number: i.e Four not 4.

The author needs to clearly state the findings in simple terms so that other researchers may pick up from there
