# Orbivirus

National Cancer Institute

## Source

National Cancer Institute. *Orbivirus*. NCI Thesaurus. Code C112365.

A genus of non-enveloped, non-turreted viruses with a triple capsid structure, in the family Reoviridae. The genome is composed of linear, segmented double-stranded RNA. Orbiviruses are infective in a wide range of arthropod and vertebrate hosts and primarily cause disease in animals.
